## PREFACE

---

This volume represents the culmination of efforts whereby the *Index Medicus*, published since 1879 under various auspices, and the *Quarterly Cumulative Index*, published since 1916 by the American Medical Association, are combined as the QUARTERLY CUMULATIVE INDEX MEDICUS. The new bibliographic principles, including primarily classification of subjects and authors in one alphabet, which have been significant features of the *Quarterly Cumulative Index*, are continued in the present publication. The extensive bibliographic material available in the Library of the Surgeon General's office in Washington, D. C., including practically the entire medical literature of the world, is now covered by the QUARTERLY CUMULATIVE INDEX MEDICUS.

In the preparation of this number some of the staff of the Army Medical Library have indexed and classified books, pamphlets, and articles in periodicals covering practically all of the foreign medical literature, to which a condensed English abstract of the actual content of each article (without reference to the title) has been added whenever necessary or desirable. The same personnel have indexed and classified titles in English and American periodicals not covered by the American Medical Association. These cards have been sent to the Library of the American Medical Association, the cards covering the remaining English and American medical literature added to them, and this material edited and brought into uniform style by the library staff and the indexing service of the American Medical Association. The redaction, printing, proof reading, and distribution are carried out by the various departments of the American Medical Association. The relation of the Army Medical Library staff to the redaction of the INDEX is advisory. The Carnegie Institution, which has in recent years supported the *Index Medicus*, bears a portion of the expense of publication.

The QUARTERLY CUMULATIVE INDEX MEDICUS is published in April, July, October and January. The April number indexes the journals issued during January, February and March; the July number, bound for permanence in cloth, contains, in one alphabet, references to journals published during April, May and June, with the addition of all that appeared in the April issue of the INDEX. Thus the July issue supersedes the April. The October issue indexes the journals published during July, August and September; the January issue includes the material from the October number and that for the last three months of the year. This also is bound in cloth for permanent preservation.

On pages 19-28 will be found a list of the journals indexed.

The main index is preceded by a list of new books, alphabetized as to authors, followed by a subject classification of the same material.

## INSTRUCTIONS FOR USE OF QUARTERLY CUMULATIVE INDEX MEDICUS

This periodical indexes itself alphabetically, both as to author and subject entries. Following is a typical citation for an author entry covering an original contribution:

**MANARA, M.**, *Forme di linfogranulomatosi di difficile diagnosi (forma mediastinica, forma addominale). Forma comune (cervicale)*, Arch.di biol. 3: 3-37, Sept.-Oct. '26

The citation gives the name of the author, the title of the article in the original language if English, French, German, Spanish, Italian or Portuguese, or in translation if in other languages. Then follow the abbreviation of the title of the periodical, the volume in black-face type, paging, month (day of month if a semi-monthly, semi-weekly or weekly publication) and year, in order named, i. e., J. A. M. A. 88:689-693, March 5, '27.

A subject entry is prepared by translation of the title if in a foreign language and by shortening to emphasize the significant portions. The author entry cited above appears as follows in the subject entry:

**LYMPHOGRANULOMA**  
diagnosis, mediastinal, abdominal and cervical varieties,  
[M. Manara] Arch.di biol. 3: 3-37, Sept.-Oct. '26

In this index, original articles, biographic material and other medical literature of importance are indexed in one alphabet. In searching for a specific article, the author entry should be consulted if the name of the author is known, since the complete bibliographic reference is to be found after the author's name only. In the subject entry of a foreign title a brief English abstract of the actual content of the article is substituted for the author's title, when obscure, ill-considered or misleading. In unsigned articles, the complete title in the original language as well as a translation will be found under the subject entry. If the subject only is known, the article should be sought first under the specific word in the title that defines the subject, i. e., **ANEMIA; ENDOMETRIUM; HEMIPLEGIA**; etc.

Articles with title equivalent to the capitalized heading appear immediately beneath the subject entry with the name of the author only. Unclassified titles then follow in alphabetical order according to title. Sub-classifications then follow, of which the arrangement is approximately:

Literature referable to organs and regions of the body is classified under the particular organ or region, i. e., **BRAIN, abscess; STOMACH, cancer; FEMUR, fracture**.

Articles on the action of a drug in general or the method of administering it are indexed under the name of a drug; but articles on the action of a drug in a particular disease are indexed under the disease, i. e., an article on "The Action of Tryparsamide" is indexed under Tryparsamide, while an article on "Tryparsamide in General Paralysis" is indexed under **PARALYSIS, GENERAL, therapy**.

Biographies and obituaries appear under the heading "**BIOGRAPHIES**" and "**OBITUARIES**," with cross references from individual names.

Numerous cross references are supplied from specific names of organs, from diseases, from eponyms, etc.

While the general scheme of indexing in this publication classifies the literature according to a specific arrangement, some subjects are, of necessity, grouped under broad, general headings. A representative list follows:
